Document ID	SAF-POL-01
Title	Safety Policy
Version	1.0
Status	ACTIVE
Effective date	2026-01-01
Expiry date	2027-12-31
Category	policy
Owner department	Safety

1. Hazard reports

1.1 Overheating

Overheating, smoke, sparks, a burning smell or fire risk are critical regardless of the customer's tone.

Instruct the customer to unplug the device and stop using it. Escalate immediately to the Safety department (critical management).

Do not tell the customer to keep using the product.

1.2 Battery swelling

A swollen or bulging battery is treated as an overheating hazard under 1.1.

1.3 Child safety

Choking hazards and child-safety concerns are escalated to Safety the same day.

1.4 Injury

Shock, burns or injury reports require critical management escalation and an incident record.

Collect the incident facts. Do not admit legal liability in writing (CMPL-GD-01).

2. Product holds and recalls

Safety may place a sales hold on a SKU after two independent hazard reports. Recalls are announced by Management Escalations.

3. Evidence handling

Ask the customer to keep the device and packaging. Arrange a safe collection; never ask the customer to post a damaged lithium battery.
